SUMMARY

Computer Science graduate (Big Data Analytics) with hands-on AI solutions engineering experience, including designing and deploying GenAI-powered automation workflows for real business operations. Skilled in Python, LLM integration (Anthropic Claude, OpenAI), local model deployment, and full-stack development. Experienced in designing scalable AI systems that extract patterns from operational data to automate complex, time-consuming business processes. Strong communicator and comfortable translating AI capabilities to non-technical stakeholders.

SKILLS

Programming: C#, Python, C++, Java, HTML, JavaScript, TypeScript, React, Tailwind CSS, MySQL, MongoDB, PostgreSQL, REST APIs, OOP, system design, Claude/Anthropic API, OpenAI API, Claude Code, Ollama, local model hosting, RAG pipelines, AI agents, prompt engineering, Tailscale, Arduino AI model deployment, TensorFlowLite.
Other: Agile/Scrum, CI/CD pipelines (GitHub Actions, Azure DevOps), workflow automation, data analytics, statistical analysis, HIPAA awareness, MS Office Suite.

EDUCATION

Grand Canyon University – Phoenix, AZ — April 2026
B.S. in Computer Science – Emphasis in Big Data Analytics | 3.6 GPA
Coursework: Machine Learning, Data Structures & Algorithms, Operating Systems, Probability & Statistics, Linear Algebra, Digital Logic.

PROFESSIONAL EXPERIENCE

AI Solutions Consultant – Terra Underground (Excavation & Construction) — April 2026 – Present
- Educated non-technical people on how large language models are developed and how to responsibly use them.
- Built four custom agents to harness large language models to automate long, complex tasks. All agents are fully traceable through chat logs, visual renderings, and evidence maps to quickly verify results.
- Established dynamic API connections for multiple LLM companies like Anthropic (Claude) and Google (Gemini) to optimize spending through caching and context management.
- Deployed custom chat interfaces on private, company networks for internal use.
- Established new data consistency protocols for non-technical employees to smooth out future business practices.

Paychex Externship: Prompt Hub Application Development — Sept 2025 – April 2026
- Built a full-stack LLM Prompt Hub for managing, versioning, and deploying prompts across generative AI workflows, using React, Tailwind CSS, FastAPI, and PostgreSQL.
- Collaborated in a 4-person agile team using Jira, Azure Web Services, and Microsoft Authentication.
- Designed and documented REST API endpoints, managed database integration, and contributed to cloud deployment on Azure Web Services following CI/CD best practices.

AWS – GCU Cloudathon: CityServe Device Sanitization System — April 2026
- Competed in a 2-day hackathon in a team of 5, solving a real problem for CityServe Arizona, a Phoenix-based nonprofit.
- Architected and built a guided NIST SP 800-88 device sanitization workflow with auto-generated compliance PDFs.
- Stack: React + TypeScript frontend, FastAPI backend, JWT auth, ReportLab for PDF generation, deployed on AWS.

National Student Advertising Competition, GCU — Sept 2023 – April 2025
- Led research for campaigns representing Tide and AT&T in a large cross-functional student team.
- Served as project manager (Year 1) and head researcher (Year 2), driving best-practice research methodology.

Research & Development: Terraria Mod (GitHub) — Sept 2023 – Present
- Built an original C# Terraria mod with custom items, projectiles, NPCs, and sprite design.
- Produced video showcases that accumulated 100K+ views and 3,300+ subscribers on Mint Gaming Terraria.

COMPUTER SCIENCE PROJECTS

Polygon – AI-Assisted Wave Survival Game: Web Game - GitHub
- Custom browser-based wave survival game with backend server validation and frontend game state management.
- Architected system structure and visual design; leveraged AI (Claude) throughout development.
- Deployed the full-stack game online with built in anti-cheat and rate limiting.

Private AI Voice Chat (in progress):
- Currently building a completely local AI voice assistant that can control my PC through my phone. Runs Qwen3.8 Flash Next.

Virtual Reality Video Game:
- Fully functioning island escape VR game built from scratch.

8-bit ALU:
- Hardware design with adder, subtractor, shift registers, and memory cells.

ADDITIONAL EXPERIENCE

Content Creator – YouTube — Feb 2021 – Present
Lifeguard / Games Attendant – Silverwood Theme Park — 2019 – 2022
Food Runner / Bartender / Cashier – Cochinito Taqueria — Summers 2023 & 2024
